

LIVIN VINO

L'art du vin sur mesure

The Art of Tailor-Made Wine Storage

LivinVino designs and builds on-measure wine cabinets and custom cellars in Switzerland crafted with architectural precision and refined materials, and engineered for stable temperature, controlled humidity, low vibration, and long-term reliability.

Our Story

Built from Hands-On Expertise and Swiss Reliability

LivinVino started with a simple belief: wine storage should look beautiful, but it must work perfectly. Wine is sensitive. If conditions are not stable, quality drops over time. That is why we build solutions where design and engineering work together.

The company was founded by a wine storage specialist with over 10 years of hands-on field experience in Switzerland, delivering projects across homes, restaurants, and private collections from discreet built-in cabinets to full walk-in cellars.

To guarantee long-term performance, we work with trusted engineering partners with more than 30 years of expertise, ensuring our systems meet high standards for durability, reliability, and consistency.

And because a premium installation must stay perfect over time, LivinVino works in partnership with Wine Guard, providing one of Switzerland's strongest after-sales and maintenance services so your cabinet remains protected year after year.

Custom Wine Cabinets

Designed for Your Space. Engineered for Preservation.

LivinVino creates made-to-measure wine cabinets in Switzerland, designed as architectural pieces that integrate seamlessly into your interior. Each project is tailored to your dimensions, your collection, and the atmosphere you want discreet and refined, or a true statement feature.

Behind the finish, every cabinet is built for correct wine storage: stable temperature, controlled humidity, quiet operation, and low vibration so bottles remain protected, beautifully presented, and easy to access.

Your cabinet can be tailored with

- **Size & integration** niche, built-in, under-stairs, full-height wall
- **Bottle layout** label-forward display, classic storage, mixed zones
- **Materials & finishes** wood, metal, glass, interior panels, lighting
- **Shelf systems** fixed, sliding, presentation shelves
- **Doors & details** framed glass, smoked glass, handles, locks
- **Cooling concept** integrated or remote configuration

Before We Design, We Define the Atmosphere

Every LivinVino cabinet starts with one question:

what should it feel like in the room?

Discreet and integrated, or a strong statement piece.

From there, we build the cabinet around your collection: the right capacity, the right shelf rhythm, and a presentation that highlights labels without sacrificing correct storage.

The final result is both design and performance crafted to look refined, and built to preserve.

Finishes

Solid Wood

A timeless, furniture-grade finish with natural warmth and depth. Each piece has its own grain character and can be stained to match your interior.

- Oak
 - Walnut
 - Ash
- (or other woods on request)

Wood-Effect Finish (Water-Transfer)

A refined wood-look finish applied to metal surfaces for a clean, consistent result. Ideal when you want the elegance of wood grain with a modern, durable feel and easy maintenance.

We have a wide range of wood-grain patterns is available, with many variations to match your interior.

Mirror-Polished Stainless Steel

A high-gloss, reflective finish with a strong luxury statement. Perfect for bold, modern interiors and showcase cabinets.

Colors

Brushed Stainless Steel

A satin, architectural finish with a clean and professional look. Very popular for contemporary projects because it is elegant and less reflective than polished steel.

Sandblasted Stainless Steel

A matte, mineral texture with very low reflection. It feels modern, discreet, and highly architectural—ideal for minimalist interiors.

Frosted Stainless Steel

A soft, diffused stainless steel finish with a smooth “hazy” look. Elegant and calm, it reduces glare and pairs beautifully with warm lighting.

Stainless Steel Colors

Stainless steel finishes are available in many tones and effects (light, dark, warm, bronze, etc.). We present the full range during material selection to match your project precisely.

Shelves

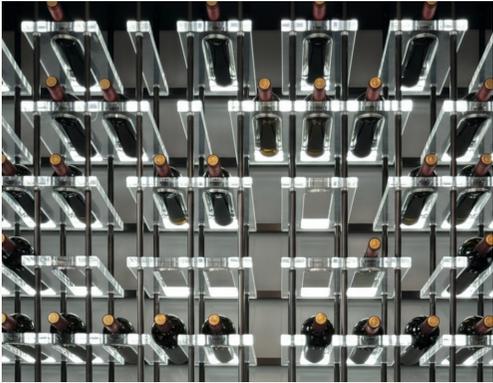

Wood Shelves

Wood shelves bring a timeless warmth and a crafted feel to the cabinet. They are ideal for collectors who want a classic, luxury look with stable bottle support. We can produce shelves in beech wood or oak wood, finished in selected tones to match your interior, while keeping bottles stored correctly for aging.

Acrylic Display

Acrylic display shelves are designed for a clean “gallery-style” presentation. They highlight labels with a minimal visual footprint, making the cabinet feel lighter and more modern. This option is perfect when presentation matters as much as storage, especially for showcase zones and feature cabinets.

Metal & Leather Display

For a more architectural cabinet, metal shelves deliver sharp lines, high rigidity, and a modern, durable structure. For a softer, more exclusive feel, leather shelves bring an ultra-premium finish with a refined tactile presence ideal for statement displays. Both solutions combine elegance and stability for correct long-term storage.

Doors and Details

Door Types

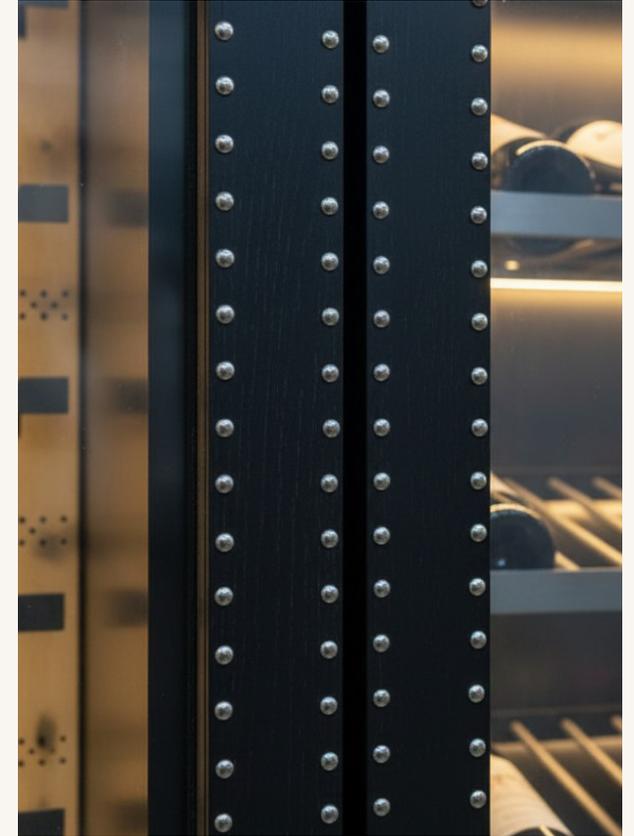

Full Glass Door

A pure showcase door that highlights your collection with maximum visibility. Perfect for statement cabinets and display-focused designs.

Stainless Steel Frame

A clean, architectural door with a refined stainless steel frame for a premium, structured look modern, understated, and with a controlled view inside.

Veneer Door

A discreet, warm front designed to blend seamlessly into furniture and wall panels. Ideal for built-in projects where the cabinet should feel integrated.

Security Options

Smart Lock

Secure keyless entry for easy controlled access ideal for daily use and shared spaces.

Key Lock

A simple, reliable solution for classic security and peace of mind.

Handles Options

Concealed Handle

A clean, minimal solution designed to keep the front perfectly seamless. Ideal for modern and built-in projects where you want pure lines and a discreet opening grip.

Door Handle

A visible handle that can become a design detail and match surrounding hardware in the room. Ideal when you want a more expressive finish, or a stronger grip for frequent use.

Lighting Options

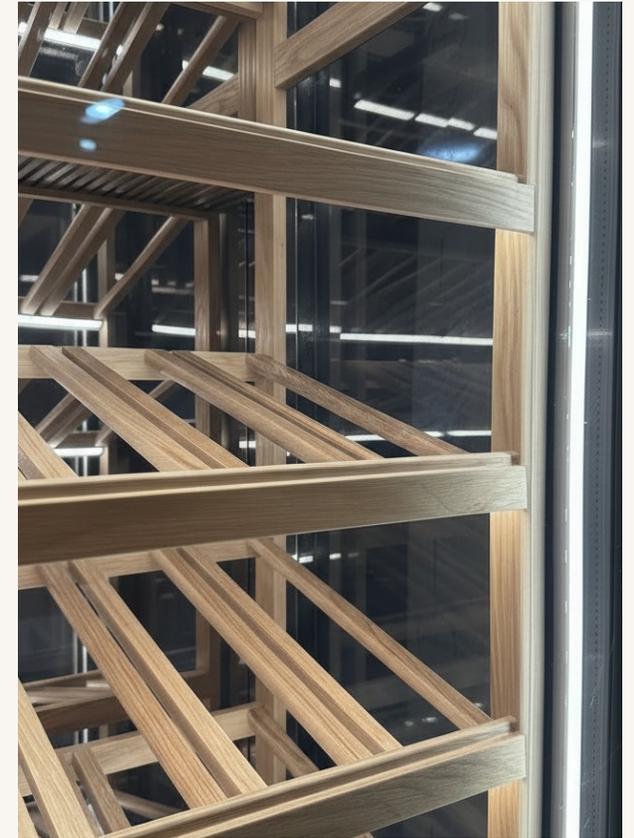

2300K Yellow Light

A golden, cosy tone for an ultra-premium atmosphere. Ideal for wood finishes and lounge-style spaces.

3000K Warm White

Warm and elegant with clear visibility. The best balance for most interiors, working well with wood and stainless steel.

6000K Cool White

Bright, modern white for a sharper, more technical look. Best for contemporary projects and high-visibility display zones.

Our Process

01 On-Site Concept

We visit your space to confirm feasibility and technical constraints, then define the project direction: cabinet location, capacity targets, bottle formats, design intent, and preferred materials and finishes.

02 Design & Engineering

You receive a complete project file with technical drawings and full specifications, with 3D visuals available upon request. Every detail is reviewed and validated by our engineer before we issue the final quotation.

03 Quotation Approval

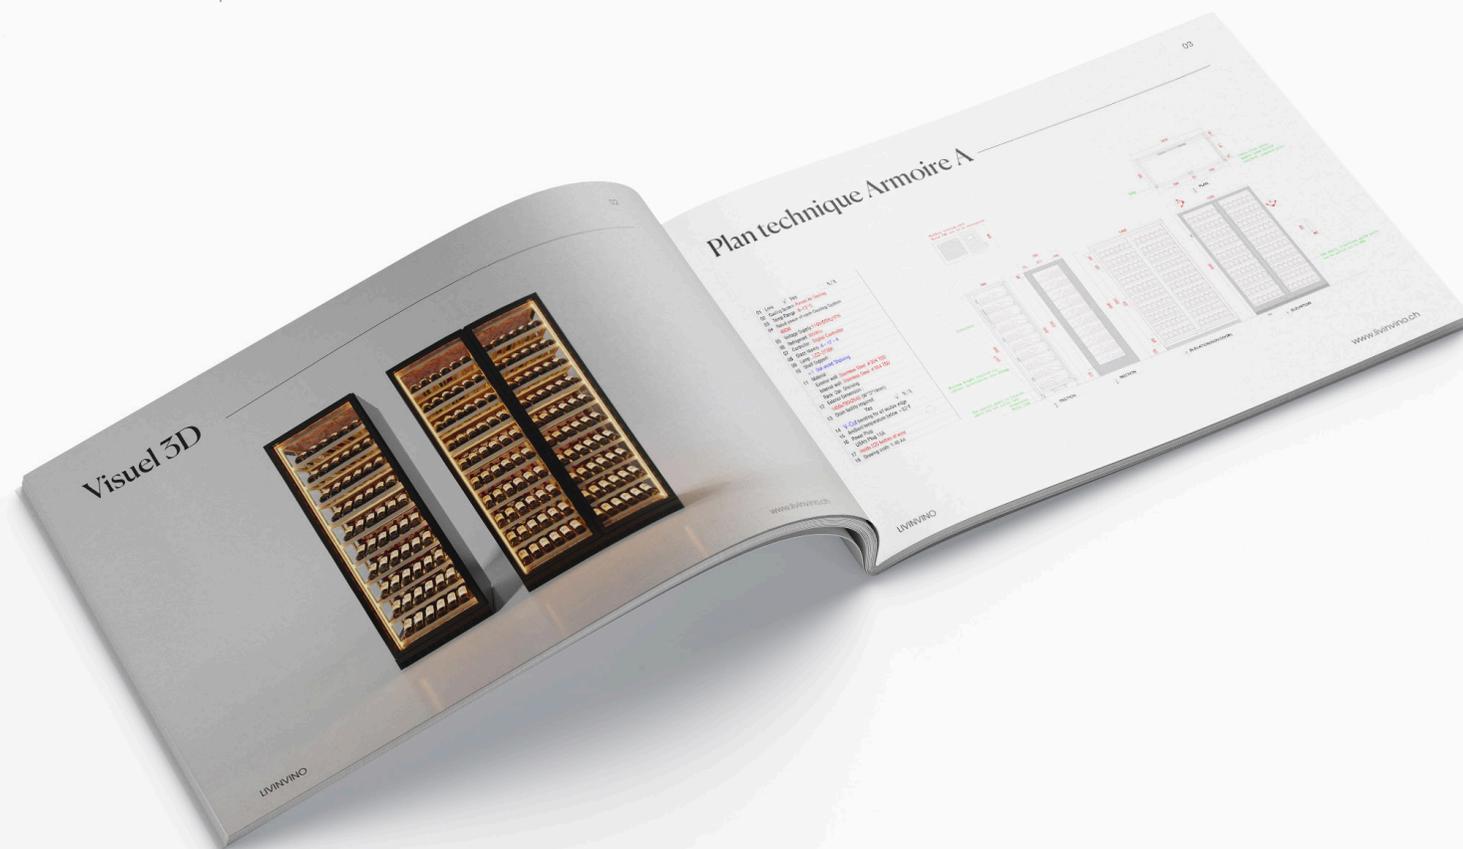

Signature and deposit confirm the project and secure your production slot.

04 Fabrication

Built to order within our production schedule (90–120 days). This lead time allows precise craftsmanship, custom finishes, and full quality control.

05 Delivery & Installation

Installed on-site by experienced technicians with precise alignment and clean integration. We complete a final functional check to ensure everything operates correctly before handover.

From first site visit to final installation, every detail is planned for seamless integration and reliable wine preservation.
